

## PrimeGrid's Sierpinski/Riesel Base 5 Problem

On 23 May 2015, 17:47:52 UTC, PrimeGrid's Sierpinski/Riesel Base 5 Problem project eliminated  $k=144052$  by finding the mega prime:

$$144052 * 5^{2018290} + 1$$

The prime is 1,410,730 digits long and will enter Chris Caldwell's "The Largest Known Primes Database" (<http://primes.utm.edu/primes>) ranked 54<sup>th</sup> overall. This is the largest known base 5 mega prime. 36 k's now remain in the Sierpinski Base 5 Problem.

The discovery was made by Wolfgang Schmidt of Germany using an Intel(R) Core(TM) i7-4770 CPU @ 3.40GHz with 16GB RAM running Linux. This computer took about 6 hours 17 minutes to complete the primality test using LLR. Wolfgang is a member of the Special: Off-Topic team.

The prime was verified on 26 May 2015, 17:48:33 UTC by user RoBorg of the United Kingdom using an Intel(R) Core(TM) i7-2600 CPU @ 3.40GHz with 8GB RAM running Microsoft Windows 7 Professional. This computer took about 15 hours 24 minutes to complete the primality test using LLR. RoBorg is a member of the Brony@Home team.

Credits for the discovery are as follows:

1. Wolfgang Schmidt (Germany), discoverer
2. PrimeGrid, et al.
3. Srsieve, sieving program developed by Geoff Reynolds
4. LLR, primality program developed by Jean Penné

Entry in "The Largest Know Primes Database" can be found here:  
<http://primes.utm.edu/primes/page.php?id=119944>

Using a single PC would have taken years to find this prime. So this timely discovery would not have been possible without the thousands of volunteers who contributed their spare CPU cycles. A special thanks to everyone who contributed their advice and/or computing power to the search - especially all the sievers who work behind the scenes to make a find like this possible.

The Sierpinski/Riesel Base 5 Problem will continue to search for more primes. To join the search please visit PrimeGrid: <http://www.primegrid.com>

# PrimeGrid's Sierpinski/Riesel Base 5 Problem

## About PrimeGrid

PrimeGrid is a distributed computing project, developed by Rytis Slatkevičius, Lennart Vogel, and John Blazek, which utilizes BOINC and PRPNet to search for primes. PrimeGrid's primary goal is to bring the excitement of prime finding to the "everyday" computer user. Simply download the software and let your computer do the rest. Participants can choose from a variety of prime forms to search. With a little patience, you may find a large or even record breaking prime.

## BOINC

The Berkeley Open Infrastructure for Network Computing (BOINC) is a software platform for distributed computing using volunteered computer resources. It allows users to participate in multiple distributed computing projects through a single program. Currently BOINC is being developed by a team based at the University of California, Berkeley led by David Anderson.

This platform currently supports projects from biology to math to astronomy. For more information, please visit BOINC: <http://boinc.berkeley.edu>

## PRPNet

PRPNet is a client/server application written by Mark Rodenkirch that is specifically designed to help find prime numbers of various forms. It is easily ported between various OS/hardware combinations. PRPNet does not run each PRP test itself, but relies on helper programs, such as LLR, PFGW, phrot, wwwp, and genefer to do the work.

For more information, please visit PrimeGrid's PRPNet forum thread:
