PrimeGrid's
Proth Prime Search

On 9 Sep 2011 11:50:50 UTC, PrimeGrid's Proth Prime Search project found a prime Fermat divisor:

$$25*2^{2141884}+1 \text{ Divides } F(2141872)$$

The prime is 644,773 digits long and will enter Chris Caldwell's "The Largest Known Primes Database" (http://primes.utm.edu/primes) ranked 5th for prime Fermat divisors and 88th overall. It is the 9th divisor found in 2011 and 292nd overall.

The discovery was made by Grzegorz Granowski of Poland using an Intel Xeon X5550 @ 2.67GHz with 12 GB RAM running Windows Vista x64. This computer took just over 58 minutes and 28 seconds to complete the primality test using LLR. Grzegorz is a member of the Polish National Team.

The prime was verified on 11 Sep 2011 12:02:18 UTC, by John R. H. Graham of Canada using an Intel i7 920 @ 2.67GHz with 12 GB RAM running Windows 7 x64. This computer took about 1 hour and 47 minutes to complete the primality test using LLR. John is a member of Team Canada.

The credits for the discovery are as follows:

1. Grzegorz Granowski (Poland), discoverer
2. PrimeGrid, et al.
3. Srsieve, sieving program developed by Geoff Reynolds
4. PSieve, sieving program developed by Ken Brazier and Geoff Reynolds
5. LLR, primality program developed by Jean Penné
6. OpenPFGW, a primality program developed by Chris Nash & Jim Fougeron with maintenance and improvements by Mark Rodenkirch

Entry in "The Largest Know Primes Database" can be found here: http://primes.utm.edu/primes/page.php?id=101943.

Fermat number divisibility (including generalized and extended) was checked by OpenPFGW using the following settings: -gxo –a2 25*2^2141884+1. For more information about Fermat and generalized Fermat number divisors, please see Wilfrid Keller's sites:

• http://www.prothsearch.net/fermat.html
• http://www1.uni-hamburg.de/RRZ/W.Keller/GFNfacs.html

Generalized and extended generalized Fermat number divisors discovered are as follows:

25*2^2141884+1 Divides GF(2141871,5)   25*2^2141884+1 Divides xGF(2141872,8,5)
25*2^2141884+1 Divides xGF(2141872,5,2)   25*2^2141884+1 Divides GF(2141872,10)
25*2^2141884+1 Divides xGF(2141867,5,4)

Using a single PC would have taken years to find this prime. So this timely discovery would not have been possible without the thousands of volunteers who contributed their spare CPU cycles. A special thanks to everyone who contributed their advice and/or computing power to the search - especially all the sievers who work behind the scenes to make a find like this possible.

This is PrimeGrid's 8th prime Fermat divisor. The Proth Prime Search will continue to search for more primes. To join the search please visit PrimeGrid: http://www.primegrid.com

PrimeGrid's
Proth Prime Search

About PrimeGrid

PrimeGrid is a distributed computing project, developed by Rytis Slatkevičius, Lennart Vogel, and John Blazek, which utilizes BOINC and PRPNet to search for primes. PrimeGrid's primary goal is to bring the excitement of prime finding to the "everyday" computer user. Simply download the software and let your computer do the rest. Participants can choose from a variety of prime forms to search. With a little patience, you may find a large or even record breaking prime.

BOINC

The Berkeley Open Infrastructure for Network Computing (BOINC) is a software platform for distributed computing using volunteered computer resources. It allows users to participate in multiple distributed computing projects through a single program. Currently BOINC is being developed by a team based at the University of California, Berkeley led by David Anderson.

This platform currently supports projects from biology to math to astronomy. For more information, please visit BOINC: http://boinc.berkeley.edu

PRPNet
PRPNet is a client/server application written by Mark Rodenkirch that is specifically designed to help find prime numbers of various forms. It is easily ported between various OS/hardware combinations. PRPNet does not run each PRP test itself, but relies on helper programs, such as LLR, PFGW, phrot, and genefer to do the work.

For more information, please visit PrimeGrid's PRPNet forum thread:
